

## Rust Free Caps

Rust-free stainless steel caps are much harder than most metals such as brass.

## Italian SABAF Burners

The word "SABAF" on the hob burners is the best evidence that hob is **Made in Italy**.

## Removable Burners

All Rhoixon hobs come with **removable** burners which you can easily lift when you wish to get rid of oil stains on the hob.

## Visible Nozzle

Sometimes you may find that your flame is too small, all you have to do is to shift your burner aside, take a fine needle and poke it

**Not a hob expert? We'll turn you into one**

**We're unafraid of Comparisons.**

**We're afraid of ignorance**

Money back guarantee if you can prove otherwise.

You'd like your friends/relatives to benefit too.

## 2 Burners Italian Hob

Small family, simple needs, one 3 ring and one medium burner are practically designed to make maintenance easy!

## 4 Burners Italian Hob

Prefer 4 burners ? Own it by paying just a bit more.

## Standard Sizes

Hob External Size = 860 mm

Rhoixon hobs measure 860 x 500 mm with cut out size of 840 x 500 mm. All Italian hobs come with standardised measurements.

## Auto-Ignition

Auto ignitions are made of porcelain which is able to **withstand heat** but **unable to withstand hard knocks**. Handle with care!

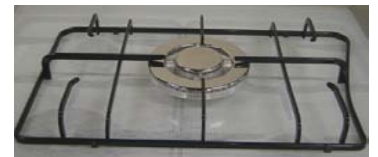

## Gas Lighter

T-286, T-386, T-486 hobs come without auto-ignition. Free gas lighter is provided with any purchase of the 3 hobs.

## Durable Pan Support

Most Italian made pan supports are durable. Even when you change your hob, the pan support will still be in working condition.

There are many varieties of hobs on the market, some are made in Indonesia, Vietnam, Malaysia, Taiwan, China, Japan

But do you know... that the Italian hobs are actually more established in the industry?

As customers how do you discern and choose?  
What do you need to know?

At Rhoixon...

We make you

## Hobs Experts

▲ Front control panel with auto ignition

▲ Side Control Panel with FREE lighter

### Standard Sizes

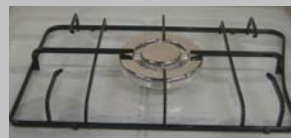

Rhoixon Italian Hobs measure 860 x 500 mm or 680 x 500 with cut out hole sizes of **840 x 480** and **560 x 480** mm respectively. Almost all Italian Hobs come with these standardised measurements.

### Changing of hobs made EASY

Most buyers are unaware of future replacement problems that may arise. We strongly recommend that you purchase Italian hobs as they come in standard sizes which makes replacement easy. Those currently facing such problems will definitely understand! Our customers who chose to use our hobs 20 years ago have had no problems with replacement to this date!

### Enameled Pan Support

Most Italian made pan supports are durable. Even when you change your hob, the pan support will still be in working condition. You might believe salesmen boasting of pan supports with **heavy duty** material like **Cast Iron**. Very often, they will neglect to tell you the flip side - once cast iron drops onto the floor, it breaks into **at least 2** pieces! Do ask about the **cost of replacement** and reconsider if cast iron pan supports are really necessary?

### Removable Burners

All Rhoixon hobs come with **removable** burners which you can easily lift to get rid of oil stains on the hob surface and burner caps. Simply place the burner and its cap back to its original position once everything is dry. Removable burners also allow for **DIY maintenance**. In contrast, the burners of some imitation Italian hobs are **fixed** - if your nozzle chokes or your flame is weak you will have to call for service or replace the entire hob!

### SABAF Burners

Rhoixon Italian hobs burners are all marked with "SABAF". In other words, the brand does not matter since

**all burners are the same for Italian hobs** - there is no BEST! since most, if not all use SABAF burners.

This is no secret and a good way to check the authenticity of an Italian hob!

### Rust Free Caps

Most Italian hobs have black cast iron burner caps. These caps will rust after awhile, affecting your burner.

Rhoixon Italian hobs come with **rust-free stainless steel caps** and they are much **hardier than most metals** such as brass.

Unconvinced? Ask any contractor if it is **harder to drill** a hole through stainless steel or any other metal and the answer will still be Stainless Steel!

### Visible Nozzle

Sometimes you may find that your flame is too small. **Servicing also comes at a price** What next? Fret not. All you have to do is to shift your burner aside, take a fine needle and poke it through the it through the nozzle to clear it. **DIY at no cost!** It's that easy! Our hobs are practically designed to make maintenance easy!

### Product Demonstration

Visit our showrooms and take a look at a **"flame fit for Asian cooking"** on our 3 Ring wok burners. See also the SABAF logo as well as our S/Steel Rust Free Caps.

**at Rhoixon outlets ONLY**

## We teach you how to maintain your hobs

### Auto-ignition

Auto ignitions spark plug are made of porcelain (see white tip), which is able to **withstand heat** but **unable to withstand hard knocks**.

They are the most vulnerable parts in hobs and can give you the most headaches. No brand will dare proclaim that the auto ignition will not spoil. Once it breaks, it will no longer work and repair is simply not worth it. We strongly recommend that you **use a lighter** instead. According to our customers, using a lighter is just as convenient once you get used to it. You may ask how long an auto-ignition can last. We have no definite answer - some last a mere **2 days**, some **2 weeks**, some **2 months** and other as long as **2 years** or **even longer!** How lasting it is really depends on the user (In most cases, they are your domestic helpers!)

### Flame Failure Device ( F.F.D )

Salesmen often speak of how good F.F.D is - when wind blows or when water overflows from your pot, the gas will be shut off automatically. Sounds reasonable? **Think again!** This is only a marketing gimmick! If it's **too windy** to cook, it is better to **shut your window** to block out the wind. Cooking windy conditions will cause flames to dance, which wastes gas and prolongs cooking time. Consider too, given the small family size these days, if you need to fill your pot to the brim? Slightly more than half of the pot would be sufficient and it is unlikely that the pot will overflow! Often, salesmen may not even know how this device really works. To ignite, **your hand has to stay on the knob for 10 seconds** (as stated in the instruction manual) This is more tedious for older people and domestic helpers.

### Is F.F.D a must-have?

**No.** The F.F.D is designed for temperate countries. In winter, windows and doors are tightly shut due to the cold. For safety, all hobs have F.F.D installed to prevent gas leakage accidents. In countries where it is sunny all year round, and windows are open, this device is not required at all. In addition, the PSB doesn't make it compulsory for all hobs to have F.F.D.

A more appropriate question would be **"Does my hob really need a F.F.D?"**

### Don't be Fooled Easily!

Most consumers will compare brands. Nearly every brand seems to come from Italy and Japan. There will be no mention of goods from Indonesia, Malaysia, China, Taiwan and Vietnam. Discerning customers will request for the salesperson to state the country of origin on the invoice to ensure that they do not get cheated.

### We Believe in Honesty

Some dealers are unwilling to disclose where their hobs are made. At **Rhoixon**, the country of origin is **clearly stated** on ALL our price tags. If a price tag states '**Made in Italy**', we **guarantee** that what you see is what you get - Authentic Italian Goods. Money back guarantee if you can prove otherwise.

### Savings Tips

Once you've read our tips, you will become smart buyers - you will not be easily fooled by mere gimmicks. In fact, how lasting or durable a hob is depends very much on the user. If one knows how to properly maintain your hobs and use it correctly, you would hardly need to call for repair. As a discerning customer, wouldn't you want to request for rebates if you did not call for repair during the warranty period?

### Don't focus on the brand, Know what you buy!

Too many brands to choose from? Is the brand that important? The answer is "**NO**" You can't use the brand to cook, can you? When cooking, what's important is that the product can withstand tests. How much do you know about the product? Knowledge is what really matters! You need to understand product features, know maintenance tips, and whether future hob replacement will be easy once you have a fixed cut out hole size.

### Guarantee Rebate

Only at **Rhoixon**, do we offer you instant rebates with our No Guarantee hobs. To this date, we have sold more than **16,000** hobs. **Still unsure?** This scheme is **win-win** for everyone. We teach you how to maintain your hobs so you pay for **servicing ONLY when you really need to.**

### Why Repair ? Just Change

Our cheapest hobs are **\$270.00** only - changing one in 3 years will not hurt abit!
